THE ISCFS

The International Society of Craniofacial Surgery (ISCFS) was founded in 1983.

It provides a forum for surgeons to exchange information and technology, fostering a worldwide community of leading experts in this highly specialized field of medicine.

The goals of ISCFS are to:

- Furnish leadership and foster advances in craniofacial surgery
- Provide a forum for exchange of knowledge pertaining to the practice
- Stimulate research, investigation, and teaching methods for preventing and correcting congenital and acquired craniofacial deformities
- Enhance the study and practice of craniofacial surgery
- Afford recognition to those who have contributed to craniofacial surgery by extending to them membership in the ISCFS

We invite you to visit the ISCFS web site www.iscfs.org or contact info@iscfs.org to learn more on the society.

ISCFS XIII Biennial International Congress

Incorporating the Paris Distraction Symposium

26-30 September 2009, Barceló Hotel, Oxford, UK

FOREWORD

ISCFS XIII Biennial International Congress - 26 to 30 September 2009

On behalf of the ISCFS, the council & officers, and the academic committee of the congress, I welcome you to Oxford for ISCFS XIII incorporating elements of the Paris Distraction Symposium.

We have been extremely fortunate in having had a submission of 447 abstracts from all aspects of craniofacial care submitted. This has allowed the academic committee, working on a blinded/anonymized basis, to make selections which have enabled us to design a high quality and comprehensive academic programme across the period of the congress.

We have also been able to incorporate significant distraction expertise for the Distraction Symposium as well as drawing on other extensive experience in all elements of craniofacial care to address various controversial areas of craniofacial care at the pre-Symposium on Sunday. We hope this will put our delegates in a position to appreciate some of the consensus views on various subjects.

The unprecedented number of registrants for this ISCFS congress has meant that we have had to make substantial changes to the conference facility in order to avoid having to turn away potential registrants. This has been successfully achieved allowing us to host all applicants and despite the current "financial crisis" on a worldwide basis which has resulted in a significant decrease in corporate sponsorship for educational purposes such as this meeting.

In this regard I would also like to thank our sponsors who have been able to contribute to the meeting.

I hope that you have both an enjoyable and successful congress in terms of the academic programme, as well as establishing new contacts and renewing friendships within the social environment of Oxford.

*Steven Arthur Wall,
MBBCh (rand) FRCS FRCPCH FCS (SA) plast
ISCFS President, 2007-2009*

Dear Colleagues,

It is a genuine pleasure and a true honour to welcome you to the « Paris Distraction meeting » taking place in Oxford in 2009, under the auspices of the XIII ISCFS biennial meeting.

First, I would like to thank all ISCFS past-presidents who unanimously supported the idea of this exceptional link between the two events. The geographical location of the ISCFS meeting in Europe is infrequent and coincided this year with the Distraction Symposium. But I would like to address special thanks to the current (2007-2009) ISCFS President, Steven Wall, who made it possible, by seizing this unique opportunity: this has meant considerable additional work to synchronize the two events, but the scientific potential of the two has been realized, with a record number of abstracts in the history of both meetings.

Some of you may not know that the idea itself of an independent "distraction symposium in Paris" was promoted by Patrick Diner and Marie-Paule Vazquez during the 1995 ISCFS meeting hosted by Daniel Marchac in Saint-Tropez, when distraction techniques started to appear as extremely promising, soon after the initial communications during the 1993 ISCFS meeting held by Fernando Ortiz-Monasterio in Oaxaca. This led to scientifically fruitful Distraction Meetings in Paris in 1997, 1999, 2001, 2003 and 2006, in which Joe McCarthy (past president) and Fernando Molina, both ISCFS members, pioneered the way in distraction techniques. Now that distraction is a well established procedure in all fields of craniofacial, maxillofacial and oral surgery, it is part of every meeting in any specialty, and the rationale for a separate distraction meeting has disappeared. This conjunction of the two events is therefore a way to close the loop back to ISCFS, where it started.

However, there is a much larger challenge in the conjunction of the XIII ISCFS Meeting and the Distraction Symposium in 2009. Over the years, we have met in the Paris meeting quite a few maxillofacial surgeons truly innovative in distraction and with considerable experience. Some of them have contributed significantly to the field and are providing rigorous scientific studies. We have supported the idea that all the disciplines should get the opportunity to know the ISCFS group. I truly believe in the collaboration of all specialties, toward the unique goal of achieving better treatment for our patients with complex conditions. I hope this goal has also been achieved. It is not the least of my preoccupations, trying to follow the strategic planning of the society initiated by past-presidents Ken Salyer and David David who deserve special thanks for that.

This ISCFS meeting is the first one after the death of Paul Tessier (1907-2008). All surgeons of the cephalic area owe him something, but Craniofacial Surgery has lost its father. Paul Tessier had called distraction osteogenesis a revolution. This revolution might have come to the end of its cycle but immense challenges are arising, such as biologically-assisted surgery.

Keeping this in mind, I wish you all an excellent meeting in Oxford. MCI, our Organising Secretariat has achieved a great job in helping for the preparation of both meetings.

*Eric Arnaud,
ISCFS Secretary-Treasurer
Co-organiser of the Distraction Symposium
with Patrick Diner*

GUIDE TO THE SCIENTIFIC PROGRAMME

The Scientific Programme is composed by three main sections:

- Distraction Symposium: Saturday 26th September, 2009
- Congress Pre-symposium: Sunday 27th September, 2009
- XIII ISCFs Congress: Monday 28th, Tuesday 29th and Wednesday 30th September, 2009

Distraction Symposium - Saturday 26th September 2009

This symposium follows the format of the previous Paris Distraction Congress with sessions devoted to the various aspect of distraction osteogenesis in the craniofacial skeleton.

Morning sessions are a combination of free scientific papers chosen from general submissions and panel discussions by experts in the field. This is held in the plenary room and attended by all delegates.

Afternoon sessions are parallel interactive sessions (SHARK) based on case presentations selected from general abstract submission and from invited speakers.

Congress Pre-symposium - Sunday 27th September 2009

This pre-symposium is based on the theme "Controversies and Consensus in Craniofacial Surgery"

It consists of four themed sessions – distraction based in the morning and general multi-disciplinary Craniofacial surgery in the afternoon.

Selected panels will give case based discussions around selected "controversies" with audience participation to try and establish "consensus" in terms of management, outcomes and implications of conditions and current treatment modalities.

ISCFs XIII Congress - Monday 28th September to Wednesday 30th September 2009

As in the past this 2.5 day Congress is offer themed free paper based sessions on all major multidisciplinary aspects of craniofacial care from basic science research to state of the art management options.

In each session, a large portion of time is dedicated to discussion and questions.

Please remember:

Access to all sessions and satellite symposium is included in the registration fees according to the package you have chosen.

PRESENTATIONS AND TIMING

The Congress has been designed to allow approximately 25% of the time to be allocated to discussion. It is therefore essential that all papers run to time as the programme has been laid out to-the-minute, with no leeway for overruns of any of the presentations.

Any overruns would eat into the discussion time, which would be a significant disadvantage to other participants in the relevant session.

Although it may appear to be a draconian step, the decision has been made to return to the previous time control measures initially established in the Taiwan meeting. This is based on a 3-colour traffic light system: a green light will remain on throughout the talk duration until 30 seconds from the end, at which point it will change to yellow. At 15 seconds from the end of the allocated time, the yellow will change to red. At the end of the allocated time, the AV system in terms of microphone and slides will be switched off. This will occur with no exceptions.

It is therefore essential that all presenters keep within their allocated time to avoid the disappointment of not being able to present their conclusions.

CME

EACCME

The ISCFs XIII Congress and Distraction Symposium have applied to the European Accreditation Council for Continuing Medical Education (EACCME) to provide the CME activity for medical specialists.

The EACCME is an institution of the European Union of Medical Specialists (UEMS); you may find more information on their website: [ywww.uems.net](http://www.uems.net).

The meeting attendees will be informed by the Congress Office, after the meeting, on the EACCME reply to the application. Should the meeting be granted accreditation, they will be sent a certificate stating the number of hours / CME gained.

FRENCH CME

The meeting will provide in total **28 credits in category 1** according to the registration attendance rules.

This accreditation is certified by the Collège Français de Chirurgie Plastique, Reconstructrice et Esthétique (CFCPRE).

PRESENTERS DISCLOSURE OF POTENTIAL CONFLICTS OF INTEREST

The ISCFs and DISTRACTION SYMPOSIUM Organising Committee requires that all presentations be as free of commercial bias as possible and that any information on commercial products or services be based on already generally accepted medical thinking. It is also preferred that generic drug names be used wherever possible and that any presentation referring to unlabelled or research-associated commercial products should disclose this situation to session attendees/on posters display.

Citation for Paul Tessier Medal 2009: Professor Linton A Whitaker

Awarded for major contributions to craniofacial care in general and services to the ISCFS in particular.

It is with pleasure that I announce the decision of the ISCFS Council to award a Tessier Medal to Professor Linton Whitaker of the Children's Hospital of Philadelphia and University of PENNSYLVANIA Medical Centre.

This is in recognition of his long-term commitment and contribution to craniofacial care over many years. He is noted for substantial contributions in surgical technique, research and particularly education (with 222 Scientific papers and co-author of 6 Textbooks). He was the founder of the Craniofacial Programme at CHOP in 1972 with the subsequent implementation of the Philadelphia Fellowship programme in 1975. This has contributed to the education and training of a substantial number (39) of currently practicing Craniofacial Surgeons on an international basis.

Professor Whitaker's award is also in recognition of his contribution to the ISCFS structure in terms of the financial management of the organisation from 1993. The official title of Chief Financial Officer was conferred on him by the society in 1997.

As a result of his stewardship during this tenure, the ISCFS has achieved a robust financial status despite the financial challenges throughout the period and particularly in the last few years.

As current President, I would like to extend congratulations to Professor Whitaker on behalf of our ISCFS membership, as well as express heartfelt thanks for both his achievements and commitments in the past and the anticipated ongoing contributions for the future.
